DETAILED ACTION

Allowable Subject Matter

Claims 1-36 are allowed in view of the Applicant's arguments (Response filed 4/24/2006, see Applicant's arguments for detail) and the cited prior art of record. The independent claims recite fast path processing at a network interface device on a response to a solicited read command in which the response is placed directly into the destination memory of the host computer, wherein the network interface device handles the network layer processing and transport layer processing, enabling the host computer's protocol stack including a session layer portion that only processes the session layer protocol, resulting in offloading the transport and network layer protocol processing to the network interface device, freeing up processing from the host computer, which, in addition to the rest of the claim limitations, are distinguished from the prior art. For support, see Instant Specification (paragraphs 14, 54-59, 62).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
